### DETAILED ACTION

1. Claims 1-7 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per claim 1, the recitation "on an a-by-a basis", line 8, is indefinite. According to applicant's remark, it should be changed to -on an a sets by a sets basis- -.

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gray et al. (4,768,159) in view of Ireland (5,694,347).

Gray et al. discloses in figure 1 a Fourier transform apparatus including transform means of a preceding stage having a ( $a=1$ ) M-point transform circuit (10), first data supply means (16), transform means of a succeeding stage (12), second data supply means (18), and twiddle factor multiplication means (14) substantially as claimed. It is noted that Gray et al. does not specifically disclose the transform means having radix 2 pipeline FFT circuits and the twiddle factor multiplication means including 2a complex multiplication circuits as claimed. However, Ireland in figure 5 a M-point radix 2-pipeline FFT circuit having data memory with two banks structure (22,24, see figure 8) as claimed. It would have been obvious to a person of ordinary skill in the art to provide the transform means of Suter et al. with radix 2 pipeline FFT circuits as taught by Ireland to implement M-point FFTs in order to reduce data storage requirements (see Ireland, col. 2, lines 48-52). In addition, since the radix 2 pipeline FFT circuits as taught by Ireland provides received two input data and provide two output data simultaneously in parallel,

it would have been obvious to a person of ordinary skill in the art to further provide the twiddle factor multiplication means of Gray et al with two complex multiplication circuit for each M-point FFT circuit in order to reduce the processing time. The combination of Gray et al. and Ireland also clearly result in the first and second data supply means that provide sets of M data points on an a set by a set basis (for  $a = 1$ ), in parallel on a two-by-two data basis to the transform means as claimed.

3. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
